

Akib Hasan

.NET Backend & Integration Engineer

Payments middleware · Core banking APIs · Dual-control workflows

Dhaka, Bangladesh · akib.hasan.learn@gmail.com.bd · linkedin.com/in/akib-hasan-iz · github.com/AkibHasan2 · AkibHasan2.github.io/Portfolio

PROFESSIONAL SUMMARY

Backend-focused .NET engineer specializing in enterprise API middleware, system integration, and controlled payment workflows. Proven connecting digital/branch channels to core banking and payment providers with maker/checker authorization, recoverable settlement paths, SQL-backed audit trails, and multi-provider façades. Also builds React operations UIs and reusable observability middleware when workflows demand it.

EXPERIENCE

.NET / C# Developer | Jamuna Bank PLC

Nov 2019 – Present

Building payment and investment middleware on .NET—core banking integration, maker/checker workflows, multi-provider settlement APIs, SQL-backed audit trails, and selected React operations UIs for branch workflows.

- Developed ASP.NET Core 8 utility-payment middleware integrating core banking and multiple biller APIs under a maker/checker model.
- Implemented Netflix Conductor workflows for approve !' CBS debit !' biller confirmation with failure tracking and task retry/rerun.
- Built .NET 8 bond middleware APIs for investment create/approve/reject using Dapper and SQL Server stored procedures.
- Integrated CBS payment posting for account debit and cheque settlement during checker authorization of bond operations.
- Implemented bond transfer workflows including holdings search, partial transfer, inventory reallocation, and certificate invalidation.
- Developed React operations SPA for maker/checker bond flows with role-based access, validation, and reporting exports.
- Generated verifiable bond PDF certificates using short-token QR links protected with AES-GCM and hashed token storage.
- Built a central document QR generate/verify API with dual-layer AES-256-GCM encryption and a two-step identity challenge.
- Delivered a React verify portal with Turnstile bot protection, rate-limited public verify, and async audit/expiry workers.
- Developed channel fund-transfer middleware enabling digital channels to verify and credit deposit, DPS, and loan accounts via CBS APIs.
- Implemented product-specific validation, client transaction uniqueness checks, and SQL-backed request/response audit logging.
- Built a reusable ASP.NET Core conversation-logging middleware for correlation IDs and durable inbound/outbound API logging to SQL Server.
- Developed a Node.js/Express service that monitors operational account balances on a schedule and alerts ops by email/SMS when funds stay below threshold.
- Implemented retry confirmation and daily per-account alert caps to reduce false or excessive low-balance notifications.

KEY PROJECTS

- Enterprise Utility Bill Payment Integration Platform — Config-driven multi-biller façade; Conductor approve !' CBS !' biller with retry/rerun
- Enterprise Bond Investment & Transfer Platform — Maker/Checker for purchase and transfer; Inventory reserve/approve lifecycle
- Central Document Authenticity QR Platform — Dual-layer AES-256-GCM payload encryption; Opaque public tokens + two-step identity gate

- Enterprise Channel Fund Transfer Middleware — Multi-product verify/transfer flows; Channel–product–debit configuration model
- ASP.NET Core Conversation & API Logging Middleware — Correlation across request chains; Request/response + external call logging
- Account Balance Monitoring & Alert Service — Cron + manual trigger; Retry before alert

TECHNICAL SKILLS

Backend: C# / .NET 8 · ASP.NET Core Web API · Netflix Conductor · SignalR

Database: SQL Server / T-SQL · Dapper · Stored Procedures

Integration: Core Banking (CBS) APIs · Multi-provider payment façades · JWT / API auth patterns

Frontend: React · Redux Toolkit · Tailwind CSS

Security: AES-256-GCM · Cloudflare Turnstile

Tooling: Serilog

Ops: Node.js / Express

TARGET ROLES

Backend / .NET Engineer · API & Integration Engineer · Payments / Fintech Engineer · Banking technology roles

Full case studies: <https://AkibHasan2.github.io/Portfolio/> · Proprietary banking source is not published.
